Menunjuk surat Kolegium No. 400/Kol/XII/2012 tentang Jadwal Ujian 2013 dan Permohonan Soal MCQ dengan Pilihan Ganda dalam rangka meningkatkan mutu ujian nasional, bersama ini kami kirimkan contoh soal MCQ dengan pilihan Ganda dan soal disertai ilustrasi kasus.

Atas perhatian dan kerjasama yang diberikan, kami ucapkan terima kasih.

Wassalam,

Dr. dr. Wachyu Hadisaputra, SpOG(K)
Komisi Ujian Nasional

Tembusan:
Ketua Kolegium ObGin
Para Kepala Departemen ObGin

Contoh Soal:

I. SOAL MCQ DENGAN ILUSTRASI KASUS:

Question 579 – 580

A 34 year-old gravida 3, para 2 at 35 weeks' gestation complains of sharp, excruciating pain in the right flank radiation into her groin. No chills or fever have been noted. The pain resolved shortly after the patient was seen. Urinary analysis reveals numerous red blood cells (RBCs), some WBCs, and no bacteria. WBC and hematocrit are normal.

579. Of the following option, most likely diagnosis is

- (A) appendicitis
- (B) pyelonepharitis
- (C) round ligament pain
- (D) ureteral lithiasis
- (E) Meckel's diverticulum

580. Which of the following laboratory test should be performed?

- (A) serum
- (B) serum glutamic oxaloacetic transaminase (SGOT)
- (C) tine test
- (D) bilirubin
- (E) serum calcium

II. SOAL MCQ PILIHAN GANDA

Petunjuk menjawab:

Bila terdapat pilihan 1,2,3 dan 4, jawablah :

- A. Bila 1,2,3 benar
- B. Bila 1,3 benar
- C. Bila 2,4 benar
- D. Bila hanya 4 yang benar
- E. Bila semua benar

Contoh:

Ovulation:

1. occurs from alternate ovaries in successive cycles.
2. is preceded by a marked rise in serum oestrogen.
3. does not occur during the First 6 postnatal weeks.
4. is followed by d marked rise in serum progesterone.

JAWAB: C (2 dan 4)
